

1) Object that keeps the hand off of the table (elevated).

↳ this is a good point because they might want something to rest their hand on while they do the exercises and not want to hold it up (fatigue, can get in the way of things), or if they can't?

maybe on wait this is for putting it on --- nrm.

↳ made a platform to rest their hand on?

Weighted plate to add for stability

need to increase stability of device across multiple surfaces

potential display and/or power source / feedback station?

2) Glove that houses electronics like flex sensors and wires, which attaches to mechanics.

could increase stability with watch-like band of components

New idea:

like this - it could be ~~white~~ green and yellow or blue and pink maybe even red and black like spiderman

Different colors for each wire to track progress easier?

How to deal w/ people who have irregular joints

Make it waterproof

↑
Sweatproof / Breathability

Different material wires for fingers depending on condition?

↳ more variety and accessibility

difference in progress, human variability, etc. we need separate finger functionality

Golden cable

fingers wire

↳ Thumb is worse than index
